Education

B.Tech in Information Technology, Kalinga Institute Of Industrial Technology
CGPA: 8.49 , Graduation Year: 2026

Experience

SDE Intern, Dfy-Graviti

Jan 2026 – June 2026

- Developing scalable backend systems supporting real-time processing of 50M+ AIS records and maritime tracking workloads using **FastAPI**, **Django**, **Celery**, **Redis**, **Laravel**, **PostgreSQL**, **TimescaleDB**, **Docker**, and Linux infrastructure.
- Managing and optimizing TimescaleDB pipelines handling 50M+ AIS records for real-time maritime tracking and analytics.
- Orchestrated the migration of over 15 backend APIs from Django and Laravel to FastAPI, enhancing API response times by ~40% and reducing server resource usage.
- Optimized REST APIs and backend workflows processing over 1M+ database records, improving scalability, reducing query latency, and ensuring reliable high-volume data handling.

SDE Intern, NTRO(National Technical Research Organisation)

May 2025 – Aug 2025

- Developed 3 scalable production-grade modules using **React**, **FastAPI**, **Laravel**, **PostgreSQL**, and **Docker**.
 - Automated CI/CD deployment pipelines using **Docker** and **Python** on **Linux-based servers**, reducing manual deployment effort by ~50%.
 - Maintained and optimized containerized environments to improve service isolation, reliability, and long-term maintainability.
-

Achievements

Smart India Hackathon 2025 – Winner (Tech Lead)

- Led a team of **6** to create a **Multimodal RAG system** with **offline LLM inference** using **Ollama**, supporting PDF, DOCX, PPT, and audio inputs, competing against **20 teams** in the national finale.
 - Integrated vector-based retrieval pipelines and real-time streaming responses via **FastAPI + Next.js**.
-

Projects

Patient Management System (Microservices)

Architected a healthcare microservices platform comprising 5 independent services using **Spring Boot**, **Kafka**, **gRPC**, **Docker**, and **PostgreSQL**, supporting patient records, billing, and analytics workflows.

Code: github.com/pani2004/Patient-Management-System

CodeLens AI – Codebase Analysis and Understanding Tool

Created an AI-powered platform to analyze and understand large codebases using FastAPI, LangChain, Next.js.

- Enabled natural language interaction across repositories containing 100 source files using **Gemini AI**.
- Implemented semantic code retrieval workflows using **pgvector embeddings** for efficient repository search and context-aware analysis.

Code: github.com/pani2004/CodeLens

OneBox Email Aggregator (AI + Real-time Sync)

AI-powered email aggregation platform built with **TypeScript**, **Node.js**, **React**, **PostgreSQL**, and **Docker**.

- Engineered a hybrid search pipeline by combining **Elasticsearch** full-text indexing with **ChromaDB** semantic retrieval, improving search relevance and accelerating data discovery by **30%**.
- Built AI workflows using **Gemini API** for email classification and RAG-based reply suggestions.

Code: github.com/pani2004/OneBox

Portfolio Using React & Tailwind CSS

Designed a personal portfolio website showcasing projects and technical skills.

Demo: portfolio-beta-liart-56.vercel.app Code: github.com/pani2004/Portfolio

Technical Skills

Languages: C++, Java, JavaScript, TypeScript, Python

Frameworks: Next.js, React, Tailwind CSS, Node.js, FastAPI, Spring Boot, Django, Laravel, LangChain, Vue.js

Databases: PostgreSQL, MySQL, MongoDB, Prisma

Tools: Linux, Docker, Git, GitHub, Kafka, Redis, AWS EC2, gRPC, Elasticsearch, CI/CD
